(54) Title: **BARRIER SYSTEMS**

(57) **Abstract**—The present invention relates to barrier systems, in particular to a barrier system of particular use in queuing situations, deterring entry of personnel into prohibited areas and for guiding flows of people. There is described a barrier system comprising a main pillar and at least one demountable satellite pillar wherein each of said main and satellite pillars includes rolling means, such as wheels or castors, enabling the pillar to be moved easily along a surface. Each of the pillars is joined to an adjacent pillar by at least one retractable webbing assembly. Preferably each pillar is joined to each adjacent pillar by two retractable webbing assemblies.
